-- In order to edit or add to the context menu of any explorer window, you will need to edit the MIME of the document type you wish to add the context menu to. There are two ways to do this. 1. The method uses the [Registry Editor] MIME file (.reg or.reg.xml) to point to the information in the.mst that is already present in the system. This method is compatible with any version of the Windows Explorer. 2. The alternative method uses [Registry Editor] Binary file (.bin or.BIN) to directly add an entry to the MIME Database so that it will appear in the context menu. This method is compatable with all versions of Windows. CMenuExtender Requirements: -- 1. None. 2. CMExt also has some predefined commands for copying, moving and retrieving information on files and directories. A: This question has been asked and answered many times. Here's another batch of them: Create an installer which will install a context menu extension for explorer? In windows 7 context menu has been changed. Now you can download some free c-style extension for context menu created by another user. After you download it (just unzip the package) right click the context menu and select "Add Items". Now that you downloaded the extension find the "Extension.reg" file which is located in the extracted directory. Open this file with any text editor and change the path to the "Icon" folder. Now you have to make a.reg file with the following content: Windows Registry Editor Version 5.00 [HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Explorer\ShellNew\Extensions\SOMENAME] "Icon"="C:\contextMenuExtender\path\to\Icon" After that you will have to restart your computer, the context menu will be fixed. NOTE: You should add in the Registry Editor a command for each context menu. For example, if you want to add a command for the "Edit" context menu with submenus, you should add the following: Windows Registry Editor Version 5.00 [HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Explorer\ShellNew\Extensions\SOMENAME\Edit] "Edit"="$SOMENAME.cpp\edit.cpp" NOTE2: In case you want to add more menus with more and more levels of submenus and commands, you have to make many more registry edits.
