The most common electronic device used for this is a computer, which comprises the bulk of personal computer and video game console hardware. Modern video games vary in complexity, incorporating graphics and gameplay. The earliest examples of electronic games were simple discrete event driven tasks, and mechanical or electro-mechanical devices such as the LGP-30 electrified ping-pong game, the pinball machine, and the electromechanical hockey game. Other games, such as the Russian dominoes, were non-electronic and used physical or chemical means to register a win or loss, or to show a score. A game with no input device is said to be a computer game. History Video games began as electro-mechanical games in the early 1950s, such as the LGP- c9d1549cdd

Even though I have heard about this game, I still have not had the chance to play it. Like most games on this list, I would assume that many of you are already familiar with this game. This means I will have to sit down and find out exactly what is it about this game that makes it well deserving of an honorable mention. Let me start with the obvious, it is a game for your PlayStation 3. This is probably pretty bland stuff for anyone who has looked at the PlayStation 3 recently and the things it is capable of. Not only does it say it is for PS3, it also lets you play this game with your jawbone headset. In order to get this game, you can either purchase it on DVD or get it up for download for just $15. You can also rent it using your PlayStation Network account. In order to get this game, you will have to purchase it on the PSN as I have not seen it up for rent online for the time being. Croteam has managed to get the license to use FIFA 07 data up for season five of this game. It does not use the same kind of system as Rare did for defacing people's locker rooms but this is still in effect. You can also download this game on your PlayStation Portable (PSP) system. Another interesting thing about this game is that you can connect the headset that came with the PlayStation 3 system. This means if you have it, you can play this game through your PlayStation 3 just by putting this in your PlayStation 3 and out comes the game. If you only have the PSP version, the headset will cost you $19.99. However, this headset is not meant for high quality gaming, so take that into consideration before purchasing this game for just a buck more than Rare's game. This game is a straight price and simply exists. It is meant to be played through the PlayStation 3. There will no purchasing this game online or even making it available for rent. If you own a version of the PlayStation 2, this game is available for a slightly discounted price and you can use your installation disc to play this game. As stated in the last category on the list, this game is meant for the PlayStation 3. It does make use of the PlayStation 2's CD burning abilities which is a first. In order to get this game, you have to decide on which model you want to get. Either the Regular Playstation 3 or the Black ops

Feeling territorial? Head on into Gangland 2078 and start protecting your turf by looting other gangs base and their bounty. If you do it right you can build the most impenetrable fortress of your life and force any rival gangs to come and fight you to take it back. You can control your gang's base and then construct massive walls to defend it from your enemy gangs. If they get close you can teleport them inside one of the gang's own defenses and then have fun with them. Literally! Fire rockets, missiles, nukes, C4 bombs or machines to accomplish your ultimate goal: Take them all out! Configure your team Customize the look, squad and stats of each of your gang's members. They will be invaluable to your defense later in the game, but for now just slot them into your gang like they're limbs. You can give them different uniforms, armors, equipment and weapons and use their skills and abilities to your advantage. Control the base Use the Gangland Editor to build awesome bases that no one will even notice you're there. You can trap enemies inside with teleporters, build jumps pads to sneak attacks, use teleporters to deploy small nukes to force them out, set up crazy walls with fire traps and heck, grab some cargo, grab some weapons and make a horde of your own! Go global It's time to build a global presence. Your gang can now set up defenses on the world map just like those on your gang's own turf. Gangs that are on your global map cannot attack your base but they can attack yours and your gang can attack theirs. Your gang can teleport around the map and use one of your gang's residents to spy on other gang's defense systems. They can even create mega-nukes with the ridiculously overpowered Radar tower! Go back in time Can't think of what to build? It's time to go back in time and explore your gang's base from Gangland 2078. Just load your save and there you go.
